

BREEAM-RATED PROJECTS

In recent years TACP has gained experience in working closely with BREEAM assessors to achieve the highest sustainability accreditation possible. TACP has a policy that any building or environmental project will seek to minimise the adverse effects on the environment at global and local scales. TACP takes a holistic approach and ensures from the outset that all areas of the build process are considered, from the early preparation of ecological site surveys, through to the careful selection of build materials and lifelong management and energy conservation. TACP also considers the future environment, ensuring that use of recyclable materials is considered throughout the building and its surroundings.

(BREEAM ratings attained in response to individual brief requirements)
